

Notice of Weed Control Program

The Taber Irrigation District will be commencing its weed control program for the 2020 irrigation season. The chemicals used along the right-of-ways will be Oracle® (dicamba) and 2,4-D Amine 600 for the control of broad leaf weeds and RoundUp® (glyphosate) for other weeds. RoundUp® will also be used in dewatered canals for control of Cattail and Reed Canary Grass. Magnacide™ H (Acrolein, inhibited) is injected into the water on certain canals to control the growth of aquatic weeds and algae. All applications will be administered by licensed applicators under approval from Alberta Environment and Parks.

Check the website for updates at
